Professional Summary

Software Developer with 3 years of experience designing and building cloud-native applications using Java, Spring Boot, and microservices architecture. Strong focus on code quality and test-driven development, with hands-on experience in CI/CD pipelines, containerisation (Docker/Kubernetes), and distributed microservices architecture.

Education

Sahyadri College of Engineering and Management, BE in Information Science — Aug 2019 – May 2023

- CGPA: 8.44/10.0

Skills

Languages: Java, JavaScript, Python, Go

Frameworks & Libraries: Spring Boot, NodeJS, REST APIs, Microservices, JPA

Cloud & DevOps: AWS, Git, Jenkins (CI/CD), Docker, Kubernetes, Helm, Maven, SonarQube, Prometheus, Grafana, Splunk, Dynatrace (OneAgent)

Databases: MySQL, MongoDB

Work Experience

Software Engineer Intern, CloudFrame Inc. – Bangalore, KA — Feb 2023 – Jun 2023

- Developed and maintained Java/Spring Boot backend services supporting internal tooling automation and developer productivity workflows.
- Built a full-stack Text Manipulation tool (ReactJS + Spring Boot) to automate code analysis, significantly reducing issue identification time across projects.

Software Engineer, CloudFrame Inc. – Bangalore, KA — Jul 2023 – Present

- Architected a WordPress Sandbox Application with REST APIs, enabling secure self-service access to product environments and reducing onboarding friction for customers.
- Improved code migration processes by proactively identifying and resolving bugs, contributing to more reliable releases and reduced rollback incidents.
- Converted VSAM-based applications from single-threaded to multi-threaded architecture, enabling parallel request processing and improving throughput by 35%.
- Designed a Spring Boot utility that automated migration of 10+ Spring Batch jobs into microservices, reducing manual migration effort by 60% and accelerating release cycles.
- Containerised and deployed a CICS-based Spring application on Kubernetes (Docker), integrating Splunk for centralised logging and reducing mean time to debug.
- Configured Prometheus and Grafana dashboards to monitor application metrics across deployed services, improving observability and enabling proactive incident detection.

Projects

Optimal Flight Navigation — github.com/Srivatsa-Nayak

- Engineered a flight route optimization system handling GPS uncertainty, adverse weather, and system failures using robust heuristics and fallback strategies.
- Tools: React, Node.js, MySQL, A* algorithm

SQL Visualizer — github.com/Srivatsa-Nayak

- Built an interactive SQL Visualizer that parses and visually renders SQL schemas in the browser, enabling users to create, modify, and execute queries through a live UI — eliminating manual query file editing.
- Tools: Next.js, Spring Boot, SQL Parser, REST API
