Srivatsa Nayak

Software Developer · Java · Spring Boot · Cloud-Native Microservices

nayaksrivatsa15@gmail.com | +91 70192 18352 | linkedin.com/in/srivatsa-nayak | github.com/Srivatsa-Nayak

SUMMARY

Software Developer with 3 years of experience designing and building cloud-native applications using Java, Spring Boot, JavaScript, and microservices architecture. Strong focus on code quality and test-driven development, with hands-on experience in CI/CD pipelines, containerisation (Docker/Kubernetes), and distributed systems.

EXPERIENCE

CloudFrame Inc. Feb 2023 – Present · Bangalore, KA

Software Engineer Jul 2023 – Present

- Built a file comparison utility from scratch for EBCDIC mainframe files with pagination-based scrolling, enabling GB-scale comparisons without loading whole files into memory — **95% lower memory footprint**, and comparisons that previously timed out now complete.
- Architected a WordPress Sandbox Application with REST APIs, giving customers secure self-service access to product environments and reducing onboarding friction.
- Converted VSAM-based applications from single-threaded to multi-threaded architecture, enabling parallel request processing and improving throughput by **35%**.
- Designed a Spring Boot utility that automated migration of 10+ Spring Batch jobs into microservices, cutting manual migration effort by **60%** and accelerating release cycles.
- Researched and built a utility converting serialized DTOs to compile-time DTOs, plus a Maven POM property that auto-updates record lengths at build time whenever fields are added, removed, or changed.
- Containerised and deployed a CICS-based Spring application on Kubernetes (Docker) with Splunk for centralised logging, and configured Prometheus/Grafana dashboards — reducing mean time to debug and enabling proactive incident detection.
- Improved code migration processes by proactively identifying and resolving bugs, contributing to more reliable releases and fewer rollbacks.

Software Engineer Intern Feb 2023 – Jun 2023

- Developed and maintained Java/Spring Boot backend services supporting internal tooling automation and developer productivity workflows.
- Built a full-stack Text Manipulation tool (ReactJS + Spring Boot) to automate code analysis, significantly reducing issue identification time across projects.

SKILLS

Languages	Java, Python
Frameworks	Spring Boot, Node.js, REST APIs, Microservices, JPA
Cloud & CI	OpenShift, Docker, Kubernetes, Helm, Jenkins, Maven, Git
Observability	Prometheus, Grafana, Splunk, Dynatrace (OneAgent), SonarQube
Databases	MySQL, MongoDB

PROJECTS

Optimal Flight Navigation — Finalist, Airbus Aerothon github.com

Flight route optimization system handling GPS uncertainty, adverse weather, and system failures via robust heuristics and fallbacks. React, Node.js, MySQL, A*.

SQL Visualizer github.com

Parses and renders SQL schemas in the browser, letting users create, modify, and run queries through a live UI instead of editing query files by hand. Next.js, Spring Boot, SQL Parser, REST API.

EDUCATION

BE, Information Science — Sahyadri College of Engineering and Management · CGPA 8.44/10 Aug 2019 – May 2023
